12.30	Lunch and networking
13.30	Close

NISP++ is building on the highly successful National Industrial Symbiosis Programme, which uses industrial symbiosis principles and techniques to help create commercial opportunities and benefits for businesses through the exchange of their resources (including waste materials, energy and water as well as assets, logistics and expertise).

The programme is seen as positively contributing to the environment, assisting in diverting materials that would otherwise go to landfill. This not only has the advantage of creating local jobs, but also contributes to the environmental sustainability of the region.

The NISP++ event being held at the National Motorcycle Museum, Solihull on 5th September 2007 is an opportunity for West Midlands' Manufacturing and Construction companies to establish their environmental training needs as identified through the gap analysis during phase 1 of the project. NISP++ has developed a set of easy to follow industrial symbiosis guidelines contained in a booklet which will be made available on the day, free of charge, to all attendees.

On the day, delegates will have the opportunity to interact with other organisations which will address environmental training requirements, as identified by NISP member companies.

Exhibitors will include:

- Manufacturing Advisory Service (MAS)
- Groundwork WM
- Construction Skills
- City College (COTU Charterhouse) Coventry
- NEW College Redditch and Bromsgrove
- NISP West Midlands
